

Here at the Heldrich, we have 3 bonded T1 Circuits which gives us a full 4.5 Mbps of bandwidth all at once. That is triple the bandwidth and speed of most of our competitors which usually have a T1 Circuit at 1.5 Mbps. The idea behind our 4.5 Mbps T1 is to give our clients Optimum download/upload speeds across the Internet. This eliminates our clients from having to order their own T1 Circuits which provides a great cost savings. Our 4.5 Mbps T1 Circuit has been tested as well, with having a Conference In-House using Internet Access and Networked Printers with approximately 250 users on our Network simultaneously, using both hardwired and wireless connections without a hitch.
